Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

At attempt has been made to verify whether this corresponds to the full-length of the original mRNA from which it was derived. We have tried to obtain double-stranded, or double chemistry sequence across the entire clone, but potentially, there are areas in the sequence where this level of coverage was not achieved. Nevertheless, we are confident of the accuracy of this sequence as all regions of low quality, as defined by PHRAP (P. Green, in preparation), were visually inspected and edited accordingly. The consensus quality values for this sequence have been submitted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Waterston,R.

The true order of the pieces is not known and their order in this sequence record is arbitrary. Caps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                      292

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens (human)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HTG; HTGS_PHASE1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 13 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

Pred. No.

İS

the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Estimated insert size: 131000; pulse field gel estimation

Estimated insert size: 126288; sum-of-contigs estimation

Quality coverage: 7.48 in Q20 bases; pulse field gel estimation

Voulity coverage: 7.76 in Q20 bases; sum-of-contigs estimation.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 113 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Center code: WIBR

* NOTE: This, is a 'working draft' sequence. It currently
* consists of 3 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.

* This sequence will be replaced
* the accession number will be preserved.

* the accession number will be preserved.

* 62238 | 62337: gap of unknown length
* 6238 | 75937: gap of unknown length
* 75938 | 166777: contig of 13500 bp in length
* 75938 | 166777: contig of 90840 bp in length.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nucleic search, using sw model

Patent NO. 6117654

GENERAL INFORMATION:
APPLICANT: PAN, Yang
TITLE OF INVENTION: NOVEL MOLECULES OF TANGO-77 RELATED PROTEIN FAMILY
FILE REFERENCE: 09404/052001
CURRENT APPLICATION UNMBER: US/09/128,155
CURRENT FILING DATE: 1998-08-03
EARLIER APPLICATION UNMBER: US 60/091,650
EARLIER FILING DATE: 1998-07-02
EARLIER FILING DATE: 1998-07-02
EARLIER APPLICATION UNMBER: US 60/054,646
NUMBER OF SEQ ID NOS: 18
SOFTWARE: FEATSED FOR WINDOWS VERSION 3.0
LENGUETH: 152331
TYPE: DNA
ORGANISM: Homo Sapiens

COMPUTER READABLE FORM:

MEDIUM TYPE: Flöppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/814,095
FILING DATE:
CLASSIFICATION: |800
ATTORNEY/AGENT INFORMATION:
NAME: MONTGOMER: 38,972
REFERENCE/DOCKET NUMBER: 2391.00066
TELECOMMUNICATION INFORMATION:
TELEPHONE: (248) 539-5055
INFORMATION FOR SEQ ID NO: 7:
SEQUENCE CHARACTERISTICS:
LENGTH: 35060 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
TOPPLOGY: linear |
MOLECULE TYPE: other nucleic acid
DESCRIPTION: /desc = "Cosmid including ACHE DESCRIPTION: promotor, ACHE gene and ARS gene"
HYPOTHETICAL: NO
ORIGINAL SOURCE:
OPERATION SOURCE: Nome and ARS gene"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 12

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                    N_Geneseq_19Jun03:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        οy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method of diagnosing a cellular CC proliferative disorder of breast tissue, which involves determining the CC state of methylation of one or more nucleic acids isolated from the CC subject, where the state of methylation of the nucleic acids as compared CC with a state of methylation from a subject not having the cellular CC proliferative disorder of breast tissue is indicative of a cellular CC proliferative disorder of breast tissue in the subject. The nucleic acids CC may be TWIST, HOXA5, NES-1, retinoic acid receptor beta (RARbeta), CC coestrogen receptor, cyclin D2, Wilms' tumour gene (WT-1), 14.3.3 sigma, CC constant of the method is useful for diagnosing and/or determining CC a predisposition to a cellular proliferative disorder, in particular CC colloid carcinoma, tubular carcinoma in situ, lobular carcinoma, CC colloid carcinoma, tubular carcinoma in situ, lobular carcinoma, metaplastic CC carcinoma, intraductal carcinoma in situ, lobular carcinoma in situ and CC papillary carcinoma in situ. The present sequence is a gene fragment used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                            δÃ
                                                                                                                                                         В
                                                                                                                                                                                         γQ
                                                                                                                                                                                                                                                                                                                   Sequences shown in AAV54616 to AAV54621 represent LUIO5 specific
CC polynucleotide sequences. These are used in the method of the invention
CC for detecting target LUIO5 nucleic acid. The method comprises treating a
CC sample with at least one LUIO5 specific nucleic acid, or its complement
CC which is at least 50 percent identical with the LUIO5 specific nucleic
CC acid sequences (AAV54616 to AAV54621). LUIO5 is a lung disease marker.
CC cells transformed with a recombinant expression system that contains
CC LUIO5 specific nucleic acid fragments, are used to express recombinant
CC LUIO5 specific nucleic acid fragments, are used to express recombinant
CC used to detect the LUIO5 antigen, and correspondingly this antigen is
CC used to detect specific antibodies, in usual immunoassays. The LUIO5
CC polypeptides and nucleic acid sequences are used for diagnosis, staging,
CC used to detect specific antibodies, in usual immunoassays. The LUIO5
CC polypeptides and nucleic acid sequences are used for diagnosis, staging,
CC used to detect typecific antibodies, in usual immunoassays. The LUIO5
CC polypeptides and nucleic acid sequences are used for diagnosis, staging,
CC used to detect typecific antibodies, in usual immunoassays. The LUIO5
CC polypeptides are also used to screen for specific binding agents, useful
CC therapeutically. LUIO5 is a marker for lung disease (present at high
CC concentration, in altered form or in an unusual body compartment). LUIO5
CC can be detected in blood, plasma or serum in an inexpensive, non-invasive
                                                                                                                                                                                                                                        Query Match

CC golynucleotide sequences. These are used in the method comprises treating a general surject LUIO5 nucleic acid. The method comprises treating a CC for detecting target LUIO5 nucleic acid. The method comprises treating a CC sample with at least one LUIO5 specific nucleic acid, or its complement acid sequences (AAV54616 to AAV54621). LUIO5 is a lung disease marker. CC cells transformed with a recombinant expression system that contains CC LUIO5 specific nucleic acid fragments, are used to express recombinant CC LUIO5 specific nucleic acid fragments, are used to express recombinant CC LUIO5 polypeptides which are used to raise antibodies. The antibodies are CC used to detect the LUIO5 antigen, and correspondingly this antigen is CC used to detect specific antibodies, in usual immunoassays. The LUIO5 CC used to detect specific antibodies, in usual immunoassays. Staging, polypeptides and nucleic acid sequences are used for diagnosis, staging, CC polypeptides are also used to screen for specific binding agents, useful concentration, in altered form or in an unusual body compartment). LUIO5 CC can be detected in blood, plasma or serum in an inexpensive, non-invasive cc test.

                AX AAZ98109 to AAZ98242 encode AAY87224 to AAY87357 which represent the cc human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, noctropic, hepatotropic, anticancer, anti-inflammatory, antimicrobial, noctropic, hepatotropic, according to the decreased decreased and antiasthmatic activities, and can cell seed in gene therapy. HSPPs can be used to treat or prevent disorders associated with increased cell HSPP are used to treat or prevent disorders associated with increased cell HSPP are used to treat or prevent disorders associated with increased cell HSPP are used to treat or prevent disorders. (c. (including cancer), inflammation, cardiovascular, neurological, cell-trhosis, psoriasis, acquired immune deficiency syndrome, anaemia, cell-trhosis, congestive or cell-trhosis, psoriasis, acquired immune deficiency syndrome, anaemia, cell-trhosis, congestive or cell-trhosis, psoriasis, acquired immune deficiency syndrome, anaemia, cell-trhosis, congestive or cell-trhosis, schizophrenia, ovulatory defects, muscular dystrophy). HSPP for nucleic acids can be used for the recombinant production of HSPP, for cell-tel-cell-tracetion and amplification assays (for cell-tel-cell-tracetion and amplification are also used to cell-tracetion and amplification are also used to cell-tracetion and amplification are also used to cell-trace
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          26-JUN-1998;

Best Local
                                                                                                                                                                                                                                                         The present sequence is a lung specific gene (LSG) Lng107 from human clone ID 586271. The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosts involves comparing levels of LSG in samples obtained from patient and normal control.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          519
                                                         밁
                                                                                                                                Sequences shown in AAV54616 to AAV54621 represent LU105 specific
CD polynucleotide sequences. These are used in the method of the invention
CD for detecting target LU105 nucleic acid. The method comprises treating a
CD sample with at least one LU105 specific nucleic acid, or its complement
CD which is at least 50 percent identical with the LU105 specific nucleic
CD cold sequences (AAV54616 to AAV54621) LU105 is a lung disease marker.
CD cells transformed with a recombinant expression system that contains
CD cold specific nucleic acid fragments, are used to express recombinant
CD cold specific nucleic acid fragments, are used to express recombinant
CD cold specific nucleic acid fragments, are used to express recombinant
CD used to detect the LU105 antigen, and correspondingly this antigen is
CD used to detect specific antibodies, in usual immunoassays. The LU105
CD polypeptides and nucleic acid sequences are used for diagnosis, staging,
CD monitoring, prognosis, prevention, treatment and determination of
CD susceptibility to, lung disease, specifically cancer. The LU105
CD polypeptides are also used to screen for specific binding agents, useful
CD concentration, in altered form or in an unusual body compartment). LU105
CD concentration, in altered form or serum in an inexpensive, non-invasive
CD can be detected in blood, plasma or serum in an inexpensive, non-invasive

Human; PRO; benign tumour; malignant tumour; lymphoid malignancy; leukaemia; neuronal disorder; stromal disorder; blastocoelic disoinflammatory disorder; immune disorder; angiogenic disorder; gene therapy; cytostatic; neuroprotective; gene; ss.
The present invention relates to the isolation of novel human PRO polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular,
                                                                                                                   Thirty five nucleic acids encoding PRO polypeptides, useful for treating benign or malignant tumours, leukaemias and lymphoid malignancies, inflammatory, angiogenic and immunologic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GCGAGGACCGGGTATAAGAAGCCTCGTGGCCTTGCCCGGGCAGCCGCAGGTTCCCCGCGC 533

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                macrophagal, stromal and blastocoelic disorders, inflammatory, and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. ABK40254-ABK40288 encode for the human polypeptides of the invention.

                                                                                                                                                                                                 The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE ligands and various enzymes. The membrane-bound proteins and receptor immunoadhesins, for instance, can be used as therapeutic agents. Receptor receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor-ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Baker K,

The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bloactive molecules, such as equences, and their fragments, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RMA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      44
```

```
nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. C AAF44270 to AAF44470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAF44087 to AAF44269 and c in the isolation of human PRO polynucleotide and protein C AAF65154 to AAF65300 represent human PRO polynucleotide and protein C sequences given in the exemplification of the present invention.

The invention describes an isolated human PRO polypeptide. The PRO CC polypeptides are useful in detecting PRO polypeptides in a sample, in CC linking a bioactive molecule to a cell expressing a PRO polypeptide, and CC in modulating at least one biological activity of a cell expressing a PRO CC useful for treating cardiac insufficiency disorders. PRO1312 stimulates hypertrophy of neonatal heart and is thus CC useful for treating cardiac insufficiency disorders. PRO1186 and PRO1387 induce c-fos in endothelial growth, and PRO536, CC PRO1450 and PRO1387 induce c-fos in endothelial growth, and PRO536, CC PRO1560 and PRO1387 induce c-fos in endothelial growth, and PRO536, CC PRO1560 and PRO1387 induce c-fos in endothelial cells, and are thus cells are thus useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and anaagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular cells and is thus useful for inhibiting endothelial cell growth in CC pRO1068, PRO1184, PRO1346 and PRO1375 stimulated proliferation of endothelial cell growth in PRO826, PRO1068, PRO1184, PRO1346 and PRO1375 stimulated proliferation of commune response. PRO828, PRO826, PRO1068 proliferation of growth provides and are therapeutically useful for treating cells; and therefore are useful for treating retinal cell disorders of injuries, e.g. retinitis plamentosum, AMD. PRO813, PRO813, PRO183 and therefore are useful for treating kidney disorders associated with demartitis, herpetiformis or Crohn's cells associated with dermartitis, herpetiformis or Crohn's cells are thus useful for treating sports injuries, and arthritis. This cequence represents a novel human PRO protein polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton Ferrara N, Fong S, Gerber H, Gerritsen ME, Goddard A, Grimaldi JC, Gurney AL, Kljavin IJ, Napier MA, Pan J, Roy MA, Stewart TA, Tumas D, Watanabe CK, Williams PM, Zhang Z;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 2; Fig 291; 648pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer are therapeutically useful for enhancing immune response and in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Paoni

                                                                                                                                                                                                                               В
                                                                                         Qy
                                                                                                                                                                                                                                                      The invention discloses isolated PRO secreted/transmembrane polypeptides CC comprising a sequence without signal peptide and the nucleic acid CC encoding them. The polypeptides can be used to raise antibodies that CC specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least CC one biological activity of a cell. The PRO polypeptides or polynucleotides are also useful in gene therapy, in chromosome CC identification, as chromosome markers, or in generating probes. The PRO CC polypeptides are useful as molecular markers for protein CC electrophoresis, and the isolated nucleic acids may be used for CC electrophoresis, and the isolated nucleic acids may be used for CC acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO, and in affinity purification of PRO from CC acids may also be used in tissue typing. Anti-PRO antibodies are useful CC in diagnostic assays for PRO, and in affinity purification of PRO from CC ADX90083-ABX90468 are the genes encoding, the primers amplifying and the CC Note: The sequence data for this patent is also available in electronic CC format from USPTO at sequence supports.
                                                                                                                                      Query Match

New secreted and transmembrane PRO polypeptides (e.g. PRO183, PRO184, PRO361 or PRO846) useful as targets for therapeutic intervention in cancers (e.g. lung or breast cancers), or for diagnosing these cancers

Claim 2; Fig 289; 647pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides comprising a sequence without signal peptide and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO polypeptides or polynucleotides are also useful as pharmaceuticals, diagnostics, polynucleotides are also useful as pharmaceuticals, diagnostics, mammalls, e.g. humans, dogs, catts, cattle, horses, sheep, pigs, goats or rabbits as targets for therapeutic intervention in certain cancers (e.g. colon, lung or breast cancers) and diagnostic determination of the presence of these cancers. The PRO polypeptides are also useful as molecular weight markers or for chromosome identification. The PRO genes

For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jonn's Labboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 1sogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridaization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Similarity

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain 92; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers

                                                                                                                                                                                                                                                      /note="vector: pBluescript II SK-; Site_1: EcoRI; Site_2: XhOI; This library, constructed by John Davies and Jeffrey XhOI; This library, constructed by John Davies and Jeffrey McDermott, combines coNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda SAP II (Stratagene) in the EcoRI (5') and XhOI (3') sites. PBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

Butte (1992) Divisional de Sequence was carried out as part of a collaboration with the Berkeley Drosophila Decephila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 1809enic strain y2; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
